ARCO

TAX DETERMINATION FOR THE INTELLIGENT ENTERPRISE

ARCO ENABLES AUTOMATED VAT DETERMINATION FROM S/4 HANA ON-PREMISE TO CLOUD INSTANCES

Arco is Meridian's automated tax determination solution designed for instances of SAP S/4 HANA, on-premise and cloud.

The Arco application runs on the SAP BTP platform and enhances the functionality of standard SAP for global VAT determination. Following a rapid, low-touch implementation Arco achieves fully compliant and automated tax determination on all complex VAT flows for sales and purchases. .

Arco enables all the advantages of the intelligent Enterprise by using SAP BTP as the technology platform:

- A single Arco application can manage tax determination on multiple S/4 HANA instances
- Includes both Cloud and On-Premise based S/4 HANA installations
- By using an ABAP Connector Kit, Arco is accessible by any S/4 Hana system connected to the SAP BTP system
- Tax determination data delivered in the BTP
- Includes VAT determination on sales and purchase transactions, including OCR Scanning solutions and Idocs
- Single point of control of VAT rules via the Arco Information Hub
- VIES/BZST VAT ID checking module
- Full visibility of all VAT determination decisions via Process Tracker
- AutoTester enables you to test SAP VAT flows such as Sales orders and Billing documents
- Fully certified by SAP for S/4 HANA and SAP Business Technology Platform (BTP)
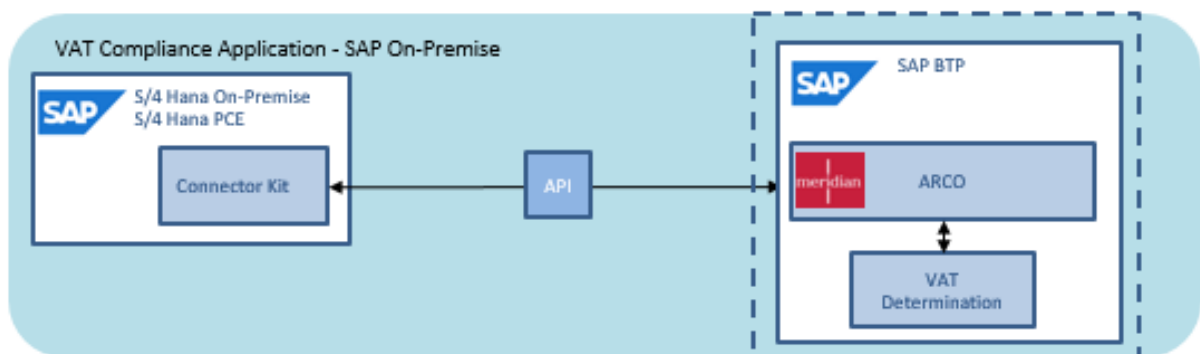

BUILT ON SAP BTP CLOUD

Arco and the tax determination function sits within the SAP Business Technology Platform (BTP)

Business Technology Platform (BTP) is SAP's new Cloud platform for application development and hosting.
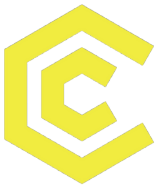

By enabling BTP applications to share SAP data and processes, BTP enables process and data integration. Even if your IT landscape hosts a highly diverse mix of on-premise and cloud solutions, you can integrate niche applications across vendors, legacy applications, various platforms, and open-source technologies to deliver a unified user experience.

Arco connects via an API to all of the businesses S/4 HANA instances, from on premises to Cloud.

VAT Compliance Application - SAP On-Premise

SAP S/4 Hana On-Premise S/4 Hana PCE — Connector Kit → API → SAP BTP — meridian ARCO ↕ VAT Determination

Arco is controlled by the customer and updates can be made by the customer. As Arco is a BTP application, it also has the capacity to integrate with all your other BTP based Intelligent Enterprise applications.

BENEFITS OF ARCO TAX DETERMINATION

- Enhances functionality of standard SAP for global VAT determination

- Achieves compliant and automated tax determination on all complex VAT flows for sales and purchases

- No need to connect to an external web service

- Tax determination data delivered in the BTP

ARCO FEATURES

Seamless integration into SAP BTP architecture

Arco has been developed for the BTP and is certified by SAP as Built On Business Technology Platform. The application will integrate seamlessly into your BTP and one Arco application in BTP can be used to access multiple instances of S/4 HANA

Determine Tax on All SAP Sales and Purchase Flows

All Arco tables are housed in central location within your SAP system. There is no need to interface with external tax engines. All VAT rules are updated centrally by Meridian, so you can be sure of correct determination in response to business and legislative changes.

Tax determination using Internal SAP Data Tables

Arco sits in the BTP environment but is able to leverage your existing master data and tax tables via an API Connector.

Arco Gives Complete Control to the Tax Department

Arco has been built to give as much control as possible to a VAT manager over how determination should work and how the application itself works. Arco provides a suite of control features as standard. This means that tax specialists can directly control an automated environment for VAT determination in SAP.

Vantage Support Helpdesk and Information Hub

Vantage is Meridian's support and service package that ensures your tax determination is always available and 1 correct. The Information Hub provides comprehensive information on using the tax determination application and platform. The Vantage Service Desk enables you to log and monitor your technical and customisation requests.

Rapid install and deployment

The Arco architecture enables a rapid install and deployment.

SAP Certified

Arco is the first and only European Tax Determination Solution that has achieved SAP Certification as Built on SAP® Business Technology Platform.
